

The yellow shovel takes samples from the flow and drops them in the black CEN Measuring Cylinder.

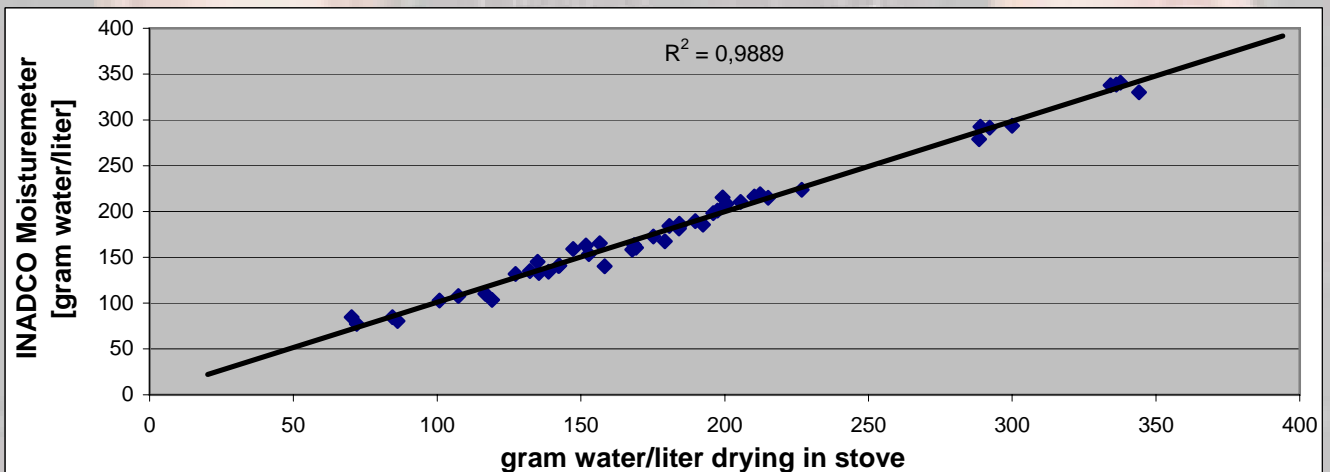

Do you also get the results of determining the moisture-contents of your growing media after they are already shipped to your customer?

## INADCO's DENSIMETER Now with a new option:

# Moisture Measurement

The first accurate, online, inline and fully automatic measuring system for determining the moisture-contents of (fertilized) growing media. Easy to implement in your bagging-, baling- or mixing line.

Real-time measuring gives you direct results. So you have the possibility to re-adjust the addition of extra water to it during the production process.

Results of the INADCO Moisturemeter compared with the method of drying in a stove
